

2025 Japan Mobility Show – Summary of TGMS Insights

November 2025 — Compiled by Tomura Global Mobility Strategy

BYD Racco (K-BEV): Early Customer Signals At Japan Mobility Show

Follow-up on my Oct 30 LinkedIn post, below are some insights from JMS visit:

Early Voice of the Customer Signals (VoC):

👤 Middle age male
(automotive industry insider)

Product is good. Definitely BYD can sell a certain number of Racco. It will depend on **dealer presence including serviceability.**

👫 Young couple (first-time EV consideration in urban use)

Wow, this is good. We should consider to buy it **if the price is ok.**

🚗⚡🧠🤖 Young male
(range-anxiety persona)

Not bad. I'm curious about the **range** on a full charge — and where I can charge it.

Strategic Implication: Japan's K-BEV adoption is not limited by product fundamentals, but rather by:

- Dealership density & aftersales confidence
- Price adjacency vs ICE K-segment
- Perceived charging convenience

Japan Mobility Show: Two Cultural Gravities in a Mature Market

✓ Japan Mobility Show reveals two gravities of a mature mobility market:

1. Gravity 1: Mobility as Culture

- Families attending even on weekdays (high cultural stickiness to mobility experiences)
- Early childhood exposure to mobility roles and manufacturing

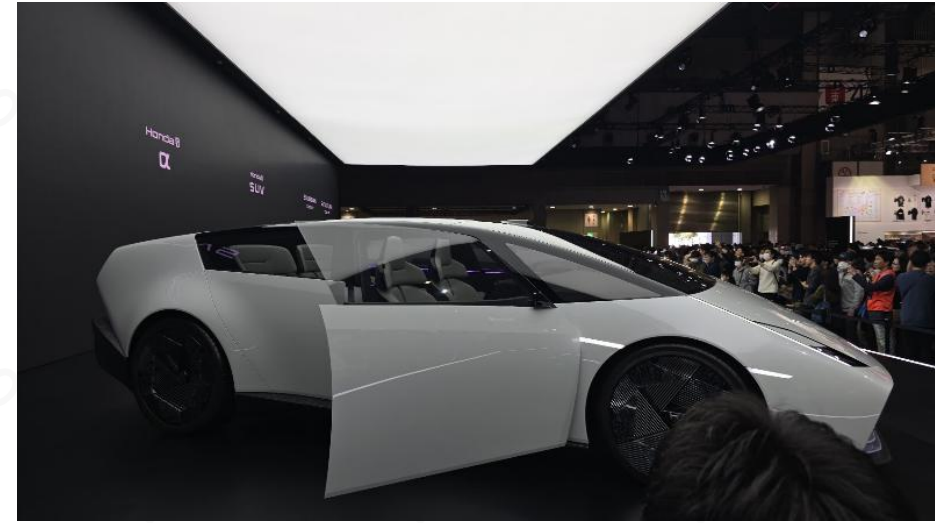

2. Gravity 2: Brand Axis Clarity

- Clear mobility philosophies strengthen emotional memory
- Daily-life alignment resonates deeply
- When heritage is present, emotional anchoring strengthens
- Where messaging becomes broad, identity risks dilution
- UX/HMI coherence signals identity more than portfolio scale

In mature markets, mobility is not merely purchased — it is remembered through culture and anchored by narrative clarity.

Japan Mobility Show: Honda 0 Observation

Observation: Strong public interest around Honda 0 at JMS. While concept design was striking, it raised practical questions on cost localization and scalability — especially for production in India under the “α” project.

Supplemental Information

Honda 0 Key Summary

Model	α	SUV	Saloon
Platform	New EV platform designed for a low center of gravity, short overhang, and a thin battery pack to maximize cabin space – Share with Sony EV (Afeela)		
Segment	Compact EV	Mid/Large SUV	Premium Sedan EV
Competitor	e-Vittara, ZS EV, Atto 3	Model Y, Ioniq5, EV6	Model 3, Europe premium BEVs
Release Date	Before Mar '28	CY26 - 27	Late CY26
Lead Markets	India / Japan	North America / Europe	North America
Target Volume	750k in CY2030 (Reduced target as a direct response to a slowdown in EV market growth)		
Battery	High-density battery packs - realize a long range with the less battery capacity		
Footprint	India – Domestic Japan – Domestic & Export (ROW)	N. America – Domestic & Export Europe - ??	N. America – Domestic & Export Europe - ??

Key Questions:

- Battery technology collaboration with who? What would be sourcing / localization strategy?
 - Footprint optimization: India covering RHD. ASEAN how to penetrate?
- With PF total annual volume 750k, how to achieve affordable compact EV targeting India?

K-Car Price/Positioning Context

Supplemental material: K-Car price/positioning context created by TGMS to support Racco market-fit analysis. Hypothetical MSRP positioning based on author assumption.
